Supervisory Patent Examiner, Art Unit 2856

/Hezron Williams/

Continuation of 11, does NOT place the application in condition for allowance because: The Examiner acknowledges the Affidavit provided by the inventor. The arguments presented (citing portions of non-patent literature documents) are not sufficient to overcome the rejections and positions of the Examiner. The arguments presented in the Affidavit only support the Examiner's position regarding the fact that altering the size of the electrode has a direct effect on it's response characteristics. There is no new evidence that one of ordinary skill in the art at the time the invention was made that would prevent or preclude one of ordinary skill in the art to vary the size of the electrode to obtain different response characteristics. Furthermore, there is no evidence that an electrode having an area of less than 15 mm2 is novel, much less not within the realm or capabilites (i.e. obvious) of one having ordinary skill in the art at the time the invention was made to try or attempt. The recent KSR decision has stated: "Section 103 forbids the issuence of a patent when the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains." KSR Int'l Co. v. Teleflex Inc. 127 S.Ct. 1727, 1734 (2007). In the instant case, as stated previously by the Examiner, one of ordinary skill in the art is well aware of size changes of the electrode leads to changes in its repsonse characteristics. Furthermore, the KSR court further recognized that "[w]hen there is a design need or market pressure to solve a problem there are a finite number of identified, predictable solutions, a person of ordinary skil has good reason to pursue the known options within his or her technical grasp." KSR, 127 S. Ct. at 1742. In such circumstances, "the fact that a combination was obvious to try might show that i was obvious under 103." Id. Once again, the Examiner states that one of ordinary skill in the art is well aware of the basic phsyics regarding the problem/issue at hand, that changes in the size of the electrode will lead to changes in response characteristics.
